Determine whether each ordered pair is a solution of $y = 4 + 2x$.

7) (1, 1)

8) (2, 8)

9) (0, 4)

10) (8, 2)

Determine whether each ordered pair is a solution of $y = 3x - 2$.

11) (1, 1)

12) (3, 7)

13) (5, 15)

14) (6, 16)

Complete the tables.

18) Alexis opened a savings account with a \$120 deposit. Each week she will put \$20 into the account. The equation that gives the total amount "t" in her account is $t = 120 + 20w$, where "w" is the number of weeks since she opened the account. Write an ordered pair (w, t) for how much money Alexis will have in her savings account after:

a. 5 weeks?

b. 9 weeks?

c. 3 months?

Write the coordinate point that corresponds with the letter and the part of the coordinate plane the point is on.

A: _____; _____

E: _____; _____

B: _____; _____

F: _____; _____

C: _____; _____

G: _____; _____

D: _____; _____

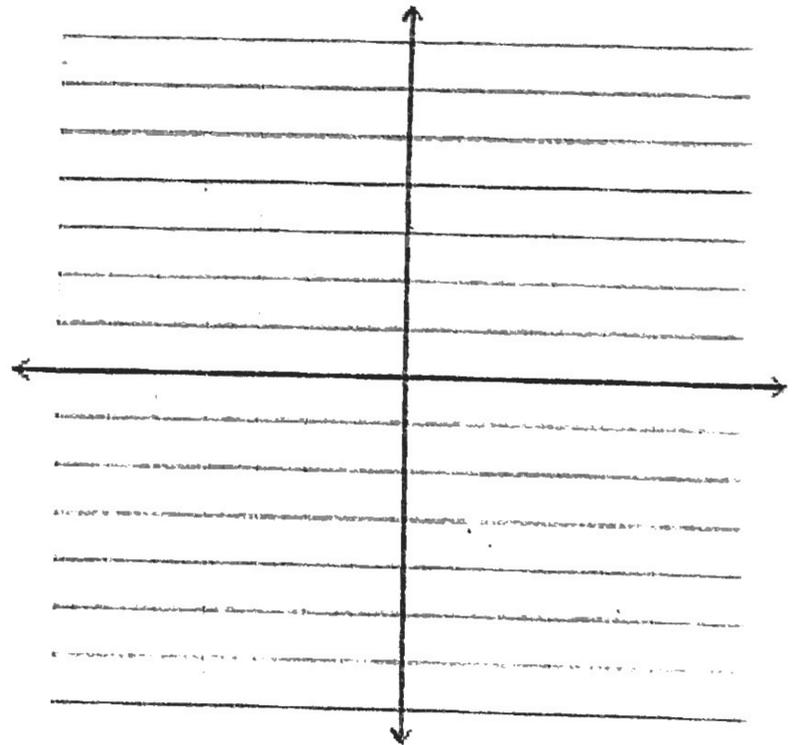

H: _____; _____

Graph the points $(-3, 1)$, $(-3, -5)$, $(3, 1)$, and $(3, -5)$.

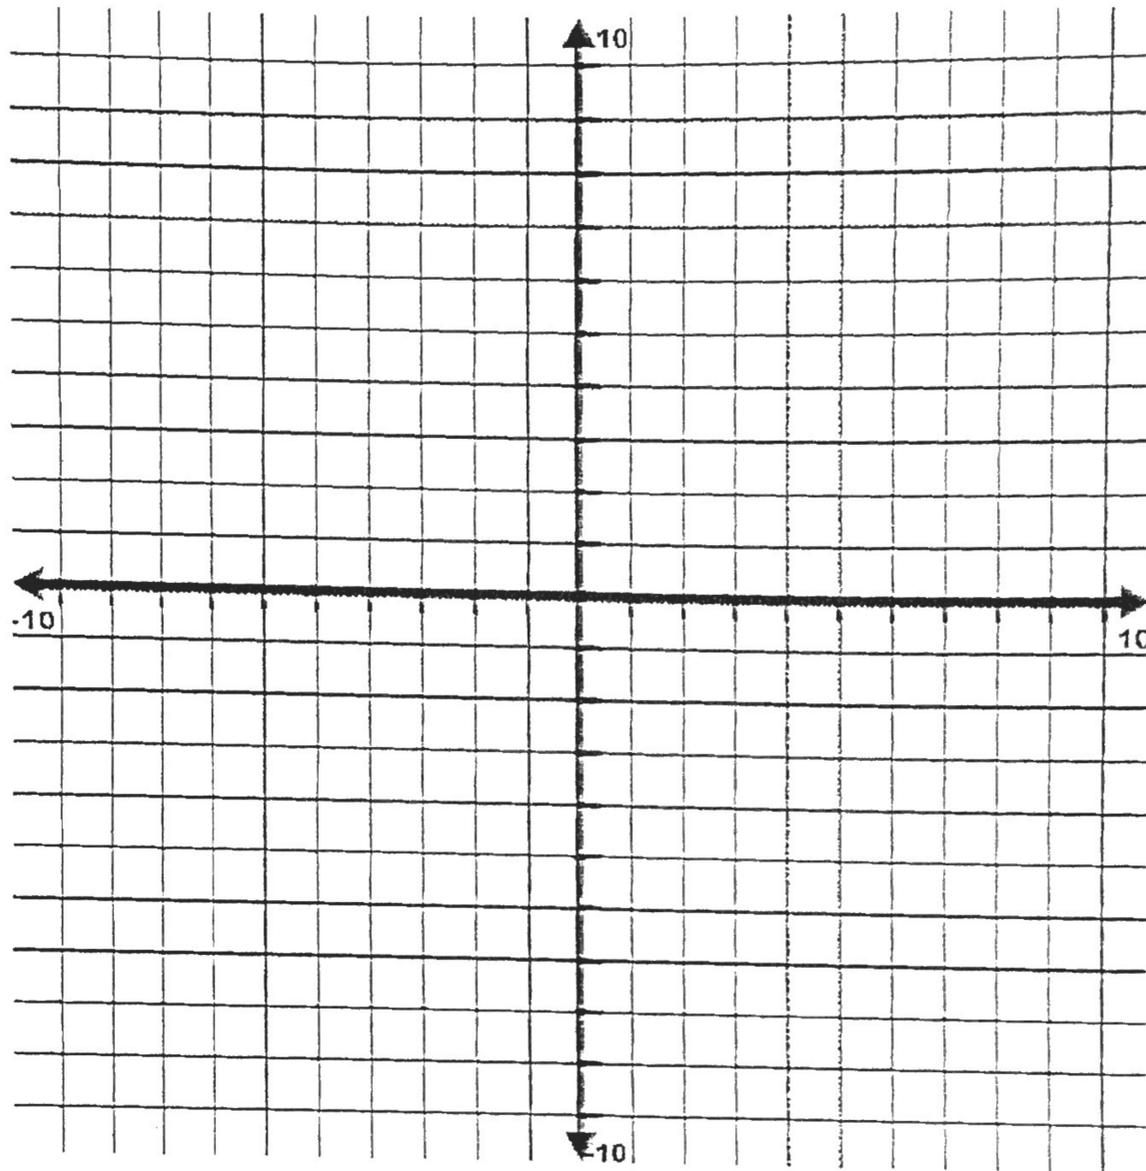

a. What type of quadrilateral do the vertices form?

b. What is the perimeter of the figure?

c. What is the area of the figure?

There is a picture hidden in this grid. Connect the points in order to reveal it.
